

# Announcing TeamTalk™ - CavCom's First Hands-Free Full Duplex System

Katie Macke

We are pleased to announce CavCom's first hands-free full duplex communication system. The **TeamTalk™** full-duplex system allows users to communicate with each other live, without delay, and without having to press a button - just full-time talk/listen like a conference call. **TeamTalk™** can accommodate hands-free communication for teams of 5 (**TeamTalk™ T-5**) or 9 (**TeamTalk™ T-9**) with unlimited PTT users for each system. The T-9 can also be linked to a two-way radio, using RadioLink™, allowing users to communicate outside of their hands-free group when needed.

**TeamTalk™** can be paired with a variety of CavCom's field-proven accessories including **EZBoom™** flip-to-mute single- or dual- headset, **Talk Through Your Ears®** earsets with an in-ear microphone, **Phantom™** lightweight headset, or the **Classic™** heavy-duty headset.

This FCC License-Free communication system helps crews overcome the challenges of communicating in environments where noise, respirators, and task complexity can affect safety and productivity.
